## 2. Investment policy & objective

### Investment objective

The investment objective of the Fund is to achieve capital appreciation over capital preservation during the full investment cycle. The Fund is ideally suited to investors with a high risk tolerance and an investment horizon of 5 years or longer.

The Fund intends to achieve its investment objective through a diversified global portfolio primarily consisting of investments in participatory interests of portfolios of collective investment schemes or other similar schemes.

### Investment policy

The Fund intends to achieve its investment objective through a diversified global portfolio primarily consisting of investments in participatory interests of portfolios of collective investment schemes or other similar schemes. The Fund will invest in participatory interests of underlying portfolios which provide exposure to a wide range of asset classes including but not limited to cash and/or money market instruments, bonds, international equities, property and commodities. The Fund may also invest in participatory interests of underlying asset allocation portfolios which provide exposure to a combination of the asset classes. The Fund may also invest in transferable securities. The portfolio has flexibility in terms of currencies and asset allocation both between and within asset classes, countries and regions.

The Fund may invest in the units of collective investment schemes which are also managed by the Manager or an associate of the Manager. Neither the Manager nor any such associated company shall be liable to account to investors for any profit, charges or remuneration made or received by the Manager or any such associated company and the Manager's fee shall not be abated thereby.

The Fund may invest in forward foreign currency exchange contracts for hedging purposes.

### Portfolio analysis

During the quarter, the fund manager has continued to manage the portfolio in accordance with the objective and policy stated above.

**Source:** Morningstar, Lipper Hindsight, Northern Trust International Fund Administration Services (Guernsey) Limited. Past performance is not indicative of future returns. The fund performance is calculated on a total return basis, net of all fees and in US dollar terms. NAV to NAV figures have been used for the performance calculations. The performance is calculated for the Fund. The individual investor performance may differ, as a result of various factors, including the actual investment date. Investment performance calculations are available for verification upon request. Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request. The global equity (MSCI AC World from 1 August 2011, MSCI World prior to 1 August 2011), global fixed income (Citi WorldBIG) and cash (LIBOR USD 7-Day from 1 August 2011, LIBID USD 7-Day prior to 1 August 2011) returns shown are those of the three components of the fund's benchmark. Peer group median: Morningstar USD Aggressive Allocation. **Past performance is not indicative of future returns.**

#### 4. Total Expense Ratio

---

The Total Expense Ratio (TER) is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees, custody fees, administration fees plus additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the Fund is divided by the Fund's total assets to arrive at a percentage amount, which represents the TER.

The size of the TER is important to investors, as the costs come out of the Fund, affecting investors' returns. For example, if a Fund generates a return of 5% for the year but has a TER of 2%, the 5% gain is diminished (to roughly 3%).

The TER of this Fund at the end of the quarter was;

##### Share Class A\*

<b>1.51%</b>
--------------

##### Share Class B\*\*

<b>1.31%</b>
--------------

\* The FGAM Global Growth Fund USD Class A has a Total Expense Ratio (TER) of 1.51%. The TER to 31 March 2026 is based on data for the period 31 March 2025 to 31 March 2026, 1.51% of the Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. The ratio does not include transaction costs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.

\*\* The FGAM Global Growth Fund USD Class B has a Total Expense Ratio (TER) of 1.31%. As at 31 March 2026, 1.31% of the Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. The ratio does not include transaction costs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.

A schedule of fees can be found in the Fund's scheme particulars and Minimum Disclosure Document, which can be obtained from the Manger's website [www.momentum.co.gg](http://www.momentum.co.gg)

## 5. Portfolio commentary

---

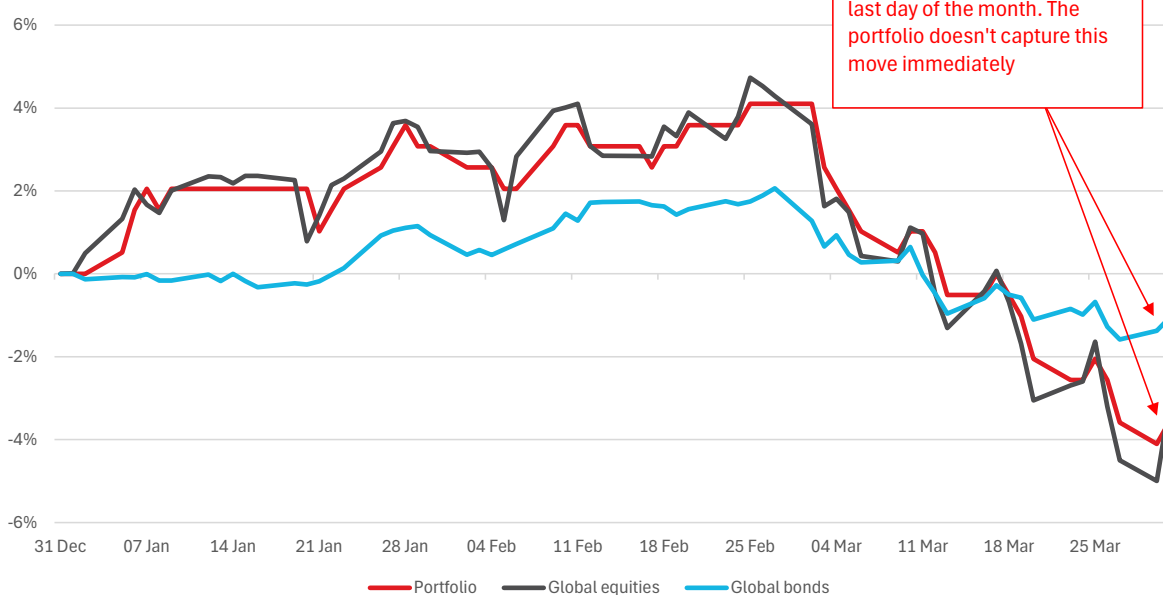

The fund's performance was negative during the first quarter. Higher risk global multi asset funds typically invest in global equities and global bonds, with a bias to equities. Global equities and global bonds both fell over the period – bonds down -1.1% and equities down -3.2% – and the portfolio was not immune to these moves.

The performance of financial markets was dominated by geopolitics in the first quarter, starting with Venezuela and ending with Iran. Markets ignored events in Venezuela because the regime was unable to defend itself or exert any kind of influence outside of its borders. The stakes are much higher in Iran, given the significance of the adjacent Strait of Hormuz as a global shipping route, and markets duly sold off as it became clear that the US could not bomb the regime into submission overnight.

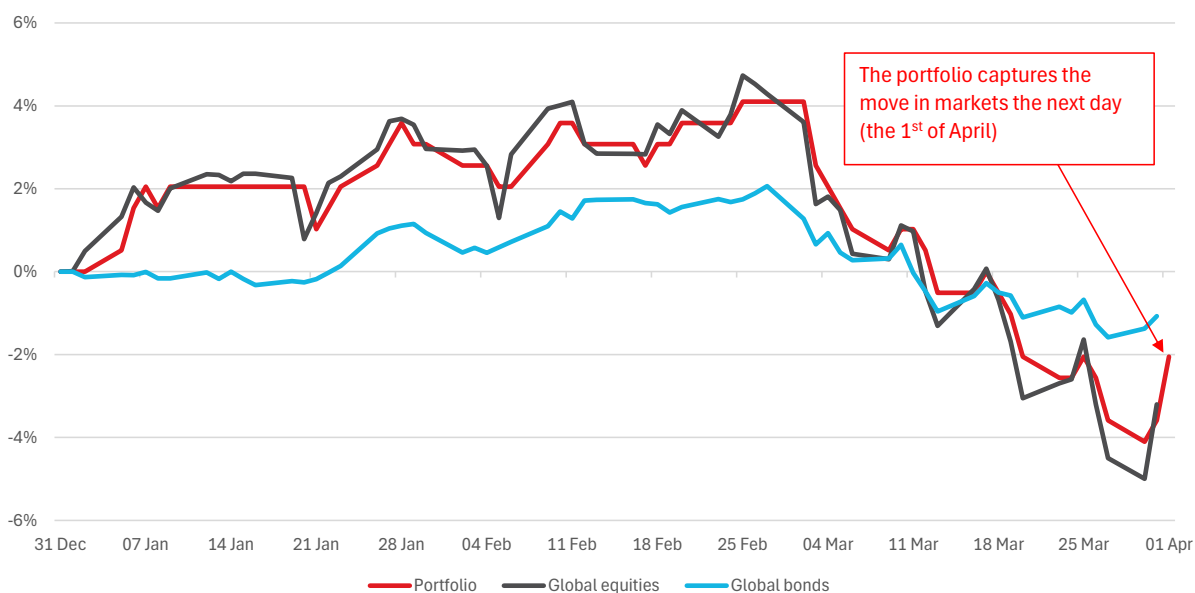

On the last day of the quarter – 31 March – equity and bond markets bottomed and rebounded, after both sides indicated their willingness to negotiate, paving the way for a ceasefire one week later. The fund did not capture all of this rebound immediately:

Performance of the portfolio in Q1 2026

Fast forward one day to the 1<sup>st</sup> of April, and we can see the impact of the rally by equities and bonds more clearly in the fund's performance:

Performance of the portfolio, including the first day of April

Things that performed well in the fund during the quarter included our position in gold, which added +7.1%. Shares in infrastructure and property businesses also gained +3.8%, while our dollar cash added +0.9% over the quarter and inflation-linked US Treasuries added +0.2%.

### Outlook

Geopolitics matter in an integrated, global market place. Broadly speaking, everyone faces the same price for fuel and fertiliser, whether you're a producer/exporter or an importer – there's one

global price. The significance of the Strait of Hormuz, which has been effectively shut now for going on six weeks, cannot be overstated in terms of its impact on these vital raw materials. This is deeply concerning, particularly when one thinks back to 2022 and the impact of Russia's invasion of Ukraine on the global economy and global financial markets.

At the same time, we need to acknowledge the differences between today and 2022: today interest rates are at close to 4% in developed markets and the chances of them going up another 4% are low. Similarly, Iran was a half a trillion dollar economy before the start of the conflict and is already significantly smaller today; the rest of the world has over \$100 trillion dollars of clout to bring to bear on the situation and force some kind of resolution, either through diplomacy or further military action.

We are not out of the woods by any means – obtaining a nuclear bomb is a defining purpose for many within the Islamic Revolutionary Guard Corps and they are happy to sacrifice themselves and others to attain it. Plus, following the rally from the bottom (global equities are up 11% from the bottom as at the time of writing) equity markets are no longer cheap. Hence we think it is appropriate to stay diversified in the portfolio today and around neutral in terms of risk levels.

## 8. Market commentary

By anyone's standards the first three months of 2026 have been an extraordinary roller coaster of geopolitical posturing and market volatility. For all the headlines, one might be surprised that global equities were 'only' down 3.5% for the period, and US treasuries were flat. Were you not looking under the bonnet you'd be forgiven for thinking it wasn't just some modest profit taking on the 22% gains racked up by the MSCI ACWI index in 2025. Not so. Markets brushed off the Venezuela skirmish in January with little concern before tensions escalated into full conflict in the Middle East. January and February's gains dissipated within a week as investors took fright over the implications for risk appetite and global growth of a protracted conflict between the US and Iran and their respective proxies and proteges. Despite President Trump's claims of regime change in Iran, the reality of supremacy passing from Ayatollah Khamenei senior to Ayatollah Khamenei junior – injured or otherwise – is that little has changed in that regard. At the time of writing, the US and Iran are observing a tentative ceasefire on condition the Strait of Hormuz be reopened. Continued bombing of Southern Lebanon by Israel is testing the peace.

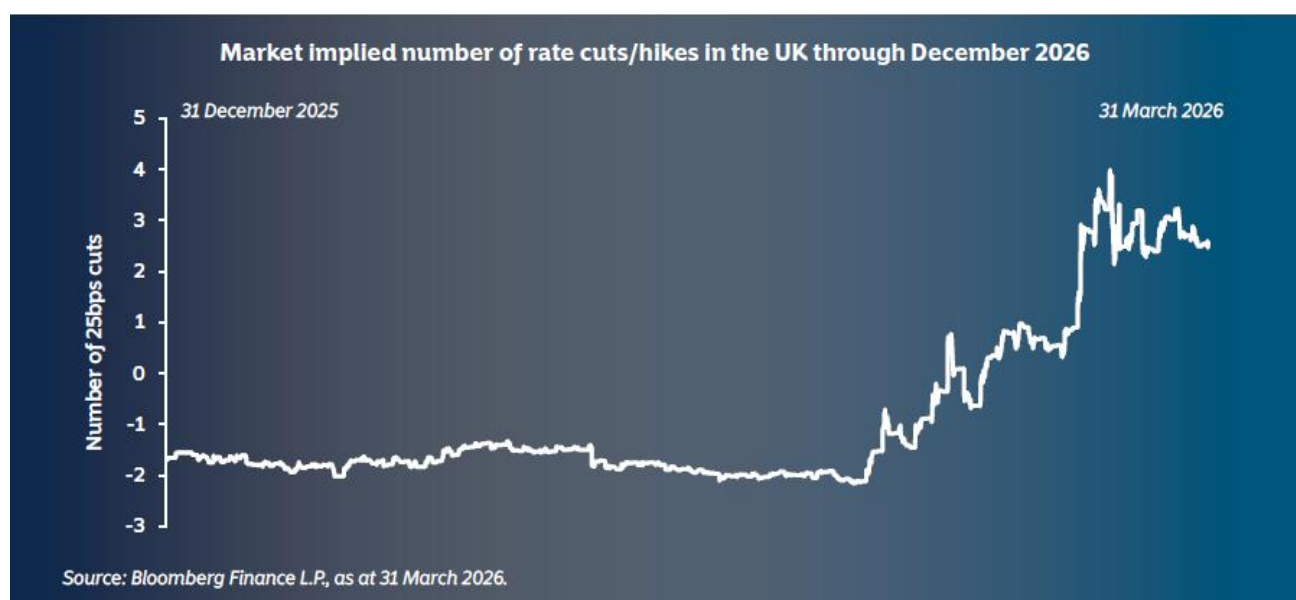

Headline asset class returns also masked much greater dispersion across geographies, sectors and styles. Global value equities generated modest gains, whilst growth equities fell almost 9% and the 'Mag7' index was down over 11% with positive earnings being crowded out by a sharp revaluation lower to a more sensible level. Regionally there were bright spots in the UK and Japan and even Eastern European equities as attention shifted to the Middle East. Core European markets were hit much harder as for the second time in four years the prospect of a lasting energy price shock knocked earnings expectations and broader risk appetite from the region. The DAX – Germany's blue-chip index which has a weighty industrial component sensitive to energy input costs – fell 7.4% over the quarter (peak to trough nearer 13%). In Asia ex Japan markets equities largely followed suit marking lower as the high-growth, energy-poor region weighed the cost of their oil imports. The geopolitical conflict pivot of course plays out well for Russia whose sanctioned oil becomes a more prized asset which is shipped mostly to Asia by a 'shadow fleet' of oil tankers, with China and India buying more than 80% of their crude oil.

Source: Bloomberg Finance L.P., as at 31 March 2026

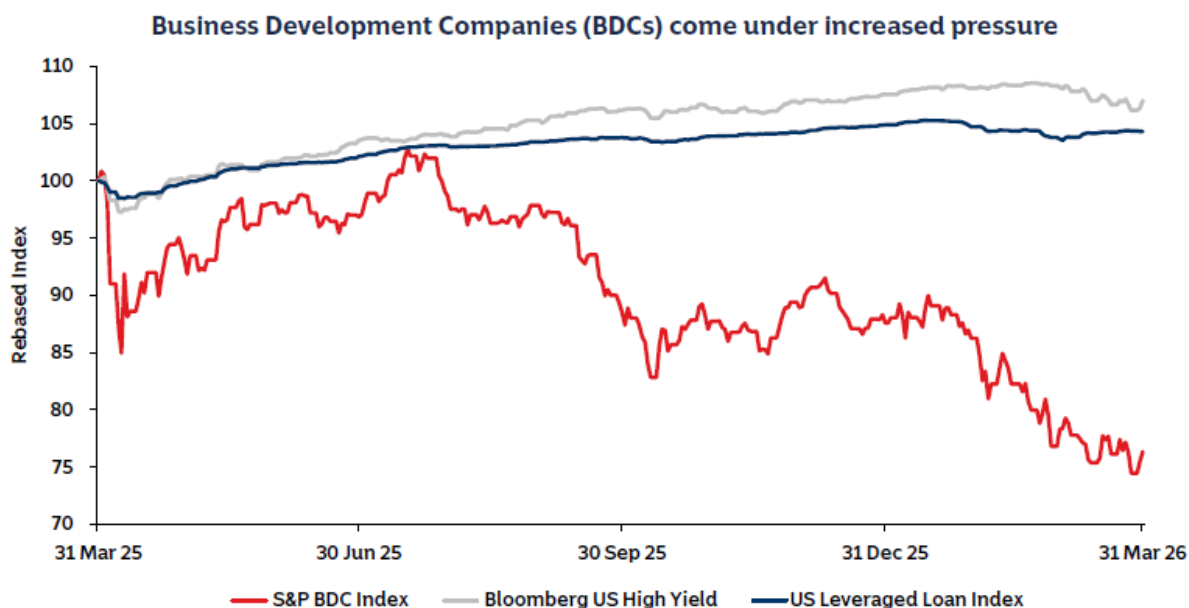

The escalation of tension between the US and Iran into a full-blown war had significant ramifications resulting in the de facto closure of the Strait of Hormuz through which passes some 20% of global oil supplies. The oil price surged by almost 30% in the first week of March and bonds fell sharply as the

inflationary impulse and more hawkish central bank stance embedded into market pricing. In the UK rates markets went from pricing two cuts before year end to pricing over four hikes before falling back as word of mediated talks emerged. This pattern of pricing was seen across markets globally, but Europe bore the brunt. None of the major central banks changed their policy rate during the quarter but there was certainly a pivot in expectations amongst policy setters, and clearly a protracted conflict and elevated energy prices would have implications for global growth, with history evidencing energy shocks as potential recessionary precursors. As the bombing continued and the Strait remained closed, so the narrative shifted from inflationary shock to growth concerns and with that the need for more accommodative policy further out should a resolution not be reached. Whilst we have a tentative ceasefire in place today, the jury is out on if and how long it lasts, and markets remain skittish. One might ordinarily expect gold to provide a haven at times like these but instead it fell sharply – almost 20% peak to trough in March, a similarly sized move to its late January correction which subsequently rebounded. Nonetheless it ended the quarter up over 7% with silver trailing but positive, and platinum and palladium both underwater for the period. Precious metals always reflect in part (inversely) the movement of the dollar in which they are denominated, and it was indeed a better period for the US dollar which having fallen through 2025 - and by any measure had become something of a consensus short – found a bid amongst the turmoil, up against most of the majors and a basket of emerging market currencies.

With the war raging over the Middle East and of course still in Ukraine, for the first time in months artificial intelligence (AI) seemed to drop down the news flow, but its impact was still very much being felt across the software as a service (SaaS) industry. There is little doubt that AI will have a lasting impact – and bring efficiency gains – to a swathe of companies operating in this space, and in time beyond, but the data these companies hold is the key enabler to providing their service, be that automated or more ‘humanly’ provided. AI can only work with the data available to it so undoubtedly some babies will have been thrown out with the digital bathwater. For now, investors remain wary of the sector which had a torrid quarter during which the S&P Software and Services index fell 24%. Linked to this equity malaise is the financing part of the equation and whilst it’s not a straight overlap in terms of underlying companies, the asset lite nature of this sector has attracted private capital in the form of private debt, an evolving asset class that is only really being tested now for the first time. Business development companies (BDCs) in the US have become the poster child for the problems manifesting in private debt and the S&P BDC index marked 13% lower over the quarter. As private funds face mounting redemption requests and start gating vehicles, portfolio ‘marks’ – the levels at which underlying loans are priced – will come under increasing pressure. Public credit markets have remained remarkably resilient, and only time will tell if and how much cross-contamination there has been but at a sector level there is considerably less exposure in public credit, and credit spread widening has been mostly confined to the broader risk-off sentiment

associated with the military conflict.

Source: Bloomberg Finance L.P., as at 31 March 2026.

As we progress into April markets have welcomed the ceasefire and rebounded strongly as oil prices dropped sharply, if temporarily. It is far too early to point to any fundamental improvement, and the positive narrative perhaps lends itself as much to short covering as it does to a genuine improvement in risk appetite. Either way, whether one views it through an investment lens or a humanitarian one, it is undoubtedly a welcome development. We had been enjoying a period of improving active manager performance (versus passive) as dispersion amongst stocks increased and the relentless rise of the 'megacaps' paused for breath. We currently find ourselves back in something of a 'RORO' (risk on, risk off) environment with Trump's ultimatums dictating the RORO regime from week to week. As naturally diversified multi asset investors we position for a longer game that favours maintaining a core allocation across asset classes with cash used sparingly and opportunistically to pivot towards more attractive risk premia. Whipsawing markets tend not to favour attempts at market timing, and we have stayed broadly invested through this quarter. Aside from the war and broader geopolitical tensions, equity markets continue to embed mid-teens earnings growth through 2026 which feels healthy even without the oppressive newsflow. For that reason, we continue to advocate maintaining a diverse allocation and avoid overconcentrating to countries, sectors, styles or themes. 2022 was a year best avoided and one where you'd take the flat return gold offered over the deeply negative 60/40 portfolio. With the yellow metal sitting some 160% higher than where it ended that year, it's unlikely to offer the same shelter again. Its recent declines during periods of heightened risk aversion attests to it being used not so much as a diversifier but as a source of cash, suggesting there may yet be more excess leverage in the system looking for a way out.

Ernst & Young LLP, PO Box 9, Royal Chambers, St  
Julian's Avenue, St Peter Port, Guernsey, GY1 4AF

## Important notes

Collective investments are generally medium to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future.

Collective investments are traded at ruling prices. Commission and incentives may be paid and, if so, would be included in the overall costs. All performance is calculated on a total return basis, after deduction of all fees and commissions and in US dollar terms. Forward pricing is used.

The Fund invests in other collective investments, which levy their own charges. This could result in a higher fee structure for the Fund.

Fluctuations in the value of the underlying funds, the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.

Deductions of charges and expenses mean that you may not get back the amount you invested.

The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.

Higher risk investments may be subject to sudden and larger falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.

Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the funds will achieve their stated objectives.

The Fund will contain shares or units in underlying funds that invest internationally. The value of an investor's investment and the income arising from it will therefore be subject to exchange rate fluctuations.

Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.

No borrowing will be undertaken by the Fund except for the purpose of meeting short term liquidity requirements. Borrowings will not exceed 10% of the net asset value of the Fund. For such

purpose, the securities of the Fund may be pledged. No scrip borrowing will be allowed.

While derivative instruments may be used for hedging purposes, the risk remains that the relevant instrument may not necessarily fully correlate to the investments in the Fund and accordingly not fully reflect changes in the value of the investment, giving rise to potential net losses.

Forward contracts are neither traded on exchanges nor standardised. Principals dealing in these markets are also not required to make markets in the currencies they trade, with the result that these markets may experience periods of illiquidity. Banks and dealers will normally act as principals and usually each transaction is negotiated on an individual basis.

The Manager has the right to close the Fund to new investors, in order to manage it more efficiently, in accordance with its mandate.

Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.

Investors are reminded that any forecasts and/or commentary included in this MDD are not guaranteed to occur, and merely reflect the interpretation of the public information and propriety research available to the Investment Manager at a particular point in time.

This report should be read in conjunction with the prospectus of Momentum Mutual Fund ICC Limited and the supplement, in which all the current fees and fund facts are disclosed.

Copies of these scheme particulars, including the Prospectus, Fund Supplement, and the annual accounts of the Scheme, which provide additional information, are available, free of charge, upon request from Momentum Wealth International Limited, La Plaiderie House, La Plaiderie, St Peter Port, Guernsey, GY1 1WF, Telephone 0044 1481 735480, or from our website [www.momentum.co.gg](http://www.momentum.co.gg).

This report should not be construed as an investment advertisement, or investment advice or guidance or proposal or recommendation in any form whatsoever, whether relating to the Fund or its underlying investments. It is for information purposes only and has been prepared and is made available for the benefit of the investors in the Fund.

While all care has been taken by the Investment Manager in the preparation of the information contained in this report, neither the Manager nor Investment Manager make any representations or give any warranties as to the correctness, accuracy or completeness of the information, nor does either the Manager or Investment Manager assume liability or responsibility for any losses arising from errors or omissions in the information.
